California Voter's Choice Act:

# Utilizing Bayesian Improved Surname Geocoding (BISG) on the 2022 Primary Election Voter File 

This report was written by the UCLA Voting Rights Project in partnership with the California Secretary of State

## About the UCLA VRP

The UCLA Voting Rights Project (UCLA VRP) is a nonpartisan, educational project housed within the Latino Policy and Politics Initiative (LPPI) at the University of California, Los Angeles. The UCLA VRP educates undergraduate, graduate, and professional degree students through our flagship voting rights clinic. The UCLA VRP works with experts and election officials across the country to ensure equitable access to voting.

## EXECUTIVE SUMMARY

Voting for the 2022 Primary Election began in May 2022 and concluded on June 7, 2022. California voters voted on races for the U.S. House of Representatives, the U.S. Senate, the California State Assembly, the California State Senate, the Governor of California, and various statewide and local offices.

This report provides a comprehensive analysis of voter registration and turnout across California and in the Voter's Choice Act (VCA) counties during the June 2022 Primary Election. The purpose of this analysis is to report patterns by voter characteristics for all California voters. We evaluated the statewide voter file by race and ethnicity, age, language, voting method, and status as an American Indian and Alaska Native (AIAN) voter.

Our analysis divides race into five categories: White, Latino, Black, Asian American and Pacific Islander (AAPI), and all 'Other.' These racial groups are similar to those used in the Census data and self-reported race in the voter files. ${ }^{1}$ The major difference is that American Indian/Alaska Native and multi-racial individuals are included with 'other' due to their small population size in most VCA counties.

The following three paragraphs have been discussed in previous VCA counties election reports and remain valid for the 2022 Primary Election.

Throughout this report, we discuss the difference in turnout between racial/ethnic groups, commonly referred to as 'the racial turnout gap' by political science scholars. ${ }^{2}$ The turnout gap is a long-documented phenomenon in voting and elections nationwide and in California. As a result of the history of exclusion and discrimination, significant differences in socioeconomic status, and lower rates of voter outreach by candidates, communities of color experience lower rates of registration and voting than white, non-Hispanics, a trend well-established for more than 50 years in California. ${ }^{3}$ This turnout gap is not unique to California and is not an outcome of the state's electoral system. States such as California are taking steps to make voting more accessible and equitable. Over time, voter participation is expected to increase for all Californians across race and ethnicity.

To ensure voter equity across racial/ethnic groups, increased efforts and investments by the state and county elections officials, as well as electoral campaigns, must be prioritized. ${ }^{4}$ Still, there will be times when voters might choose not to cast a ballot because they are not interested in the electoral process or do not feel closely aligned with any candidates. There is research that documents that states that are not closely contested

[^0]battleground states, such as California, often experience comparatively lower turnout because would-be voters correctly predict that the big statewide election contests will not be close. ${ }^{5}$

It is important to note that off-year elections or elections not occurring during a presidential or gubernatorial year are not necessarily accurate representations of the general patterns in voter participation. Turnout rates historically drop off between presidential and midterm elections, and we expect this effect to be amplified for primary elections where voter interest and awareness are often lower. ${ }^{6}$

Throughout this report, we provide aggregate summaries for statewide, non-VCA, VCA counties, and VCA counties excluding Los Angeles County. Statewide aggregated statistics include all fifty-eight California counties. Non-VCA counties' statistics refer to the thirty-one counties that had not adopted the VCA election model at the time of the 2022 Primary Election. Lastly, the VCA counties aggregated statistics include the twenty-seven counties that adopted the VCA election model at the time of the primary election. We also include estimates for VCA counties excluding Los Angeles County to be consistent with past reports.

Our findings are divided into the five major categories that this report follows structurally - 1) all voters by race and ethnicity, 2) Asian American and Pacific Islander (AAPI) voters by subethnic groups, 3) AIAN classified voters, 4) all voters by age categorization, and 5) all voters by primary language group. The major findings of this report are:

## I. Voters by Race and Ethnicity

i. California has a diverse electorate, with more than half of the state's registered voters collectively represented by communities of color such as Latino, AAPI, Black, and all 'other' non-white voters. There were approximately 21.9 million registered voters at the time of the 2022 Primary Election. Over 8.7 million, or approximately $39.7 \%$ of voters, were estimated to be white, and approximately $60.3 \%$, or $\mathbf{1 3 . 2}$ million voters, were estimated to be from nonwhite, racial/ethnic minorities.

- Approximately 6.9 million, or $31.9 \%$, were estimated to be Latino.
- Approximately 3.6 million, or $16.8 \%$, were estimated to be AAPI.
- Approximately 1.3 million, or $6.2 \%$, were estimated as all 'Other.'
- Approximately 1.1 million, or $5.3 \%$, were estimated to be Black.
ii. Approximately 16.7 million, or $\mathbf{7 6 . 4 \%}$, of the statewide registered voters, were registered in VCA counties at the time of the 2022 Primary Election. Over $\mathbf{6 . 4}$ million, or $\mathbf{3 8 . 7 \%}$ of voters, were estimated to be white and approximately 10.2 million, $61.3 \%$, of registered voters in VCA counites are estimated to be from non-white, racial/ethnic minorities.

[^1]- Among non-whites, Latinos were the largest racial/ethnic group, representing 5.3 million, or $32 \%$ of registered voters in VCA counties.
- The second largest ethnic group was estimated to be AAPI voters, with 3 million, or $18.1 \%$ of registered voters in VCA counties.
- Voters estimated to be 'Other' represented approximately 989 thousand, or $5.9 \%$ of registered voters in VCA counties.
- Voters estimated to be Black represented approximately 877 thousand, or $5.8 \%$ of registered voters in VCA counties.
iii. Over $95.1 \%$ of all voters in VCA counties recorded English as their primary language.
- Spanish-speakers represented the largest percentage of minority voters at approximately $3.02 \%$.
- Chinese-speakers represented the second largest percentage of minority voters at approximately 0.63\%.
- Vietnamese-speakers represented the third largest percentage of minority voters at approximately $0.62 \%$.
- Korean-speakers represented the fourth largest percentage of minority voters at approximately $0.38 \%$.
- Tagalog-speakers represented the fifth largest percentage of minority voters at approximately 0.08\%.
- Voters who speak languages categorized as 'Other' represent the sixth largest percentage of minority voters at approximately $0.07 \%$
- Japanese-speakers represented the seventh largest percentage of minority voters at approximately $0.003 \%$.
- Thai-speakers represented the eighth largest percentage of minority voters at approximately $0.02 \%$.
- Hindi-speakers represented the ninth largest percentage of minority voters at approximately 0.017\%.
- Khmer-speakers represented the tenth largest percentage of minority voters at approximately $0.01 \%$.
iv. More than 7.2 million voters participated in the $\mathbf{2 0 2 2}$ Primary Election in California. Unlike the distribution of the registered electorate, voters estimated to be white comprised more than half of the ballots cast statewide and in non-VCA and VCA counties.
- Voters estimated to be white represented approximately 3.8 million, or $53.5 \%$, of statewide ballots cast.
- Voters estimated to be Latino represented approximately 1.4 million, or $20.5 \%$, of statewide ballots cast.
- Voters estimated to be AAPI represented approximately 1.1 million, or $15.3 \%$, of statewide ballots cast.
- Voters estimated to be 'Other' represented approximately 453 thousand, or $6.3 \%$, statewide ballots cast.
- Voters estimated to be Black represented approximately 323 thousand, or $4.5 \%$, of statewide ballots cast.
v. More than 5.5 million, or $76.5 \%$, of statewide ballots came from voters in VCA counties and approximately 1.6 million, or $\mathbf{2 3 . 5 \%}$, of ballots came from non-VCA counties.
- Voters estimated to be White represented approximately 2.8 million, or $52.3 \%$, ballots cast in VCA counties compared to 975 thousand, or $57.5 \%$ in non-VCA counties.
- Voters estimated to be Latino represented approximately 1.1 million, or $21 \%$, ballots cast in VCA counties compared to 321 thousand, or $19 \%$, ballots cast in non-VCA counties.
- Voters estimated to be AAPI represented approximately 899 thousand, or $16.3 \%$, ballots cast in VCA counties compared to 204 thousand, or $12.1 \%$, ballots cast in non-VCA counties.
- Voters estimated to be 'Other' represented approximately 328 thousand, or $5.9 \%$, ballots cast in VCA counties compared to 124 thousand, or $7.3 \%$ in non-VCA counties.
- Voters estimated to be Black represented approximately 252 thousand, or $4.6 \%$, ballots cast in VCA counties compared to 70 thousand, or $4.2 \%$, in non-VCA counties.
vi. Across the state, there was a $\mathbf{3 3 . 0 \%}$ turnout rate during the 2022 Primary Election. Voters estimated to be Latino had the lowest turnout rate of any group and routinely fell 10 points lower than collective averages.
- Voters estimated to be white had a turnout rate of $44.4 \%$
- Voters estimated to be all 'Other' had a turnout rate of $33.3 \%$
- Voters estimated to be AAPI had a turnout rate of $29.9 \%$
- Voters estimated to be Black had a turnout rate of $28.0 \%$
- Voters estimated to be Latino had a turnout rate of $21.2 \%$
vii. In VCA counties, there was a turnout rate of $\mathbf{3 3 . 1 \%}$ during the $\mathbf{2 0 2 2}$ Primary Election compared to a $\mathbf{3 2 . 9 \%}$ turnout rate in non-VCA counties.
- Voters estimated to be white had a turnout rate of $44.7 \%$ in VCA counties compared to a turnout rate of $43.8 \%$ in non-VCA counties.
- Voters estimated to be 'Other' had a turnout rate of $33.3 \%$ in VCA counties and non-VCA counties.
- Voters estimated to be AAPI had a turnout rate of $29.6 \%$ in VCA counties compared to a turnout rate of $31.4 \%$ in non-VCA counties.
- Voters estimated to be Black had a turnout rate of $28.8 \%$ in VCA counties compared to a turnout rate of $25.7 \%$ in non-VCA counties.
- Voters estimated to be Latino had a turnout rate of $21.6 \%$ in VCA counties compared to a turnout rate of $19.7 \%$ in non-VCA counties.
viii. Across the state, the vast majority of voters utilized vote-by-mail to participate in the 2022 Primary Election.
- Approximately 6.6 million, or $91.6 \%$, of ballots were cast via Vote-By-Mail.
- Approximately 474 thousand, or $6.5 \%$, of ballots were cast via Vote Center.
- Approximately 128 thousand, or $1.8 \%$, of ballots were cast via Polling Place.
- Approximately 11 thousand, or $0.1 \%$, of ballots were cast via provisional CVR ballot.
- Approximately 1 thousand votes were cast via Nonprovisional CVR ballot.
ix. In VCA counties and non-VCA counties, the vast majority of voters also utilized vote-by-mail to participate in the $\mathbf{2 0 2 2}$ Primary Election.
- Approximately 5 million, or $91.3 \%$, ballots cast in VCA counties were cast via Vote-By-Mail compared to 1.5 million, or $92.4 \%$, ballots cast in non-VCA counties.
- Approximately 471 thousand, or $8.5 \%$, ballots cast in VCA counties were cast via Vote Center compared to 13 , or $0.0 \%$, ballots cast in non-VCA counties.
- Approximately 257 , or $0.0 \%$, ballots cast in VCA counties were cast via Polling Place compared to 126 thousand, or $7.5 \%$, ballots cast in non-VCA counties.
- Approximately 8,309 , or $0.2 \%$, ballots cast in VCA counties were cast via provisional CVR ballot compared to 1,819 , or $0.1 \%$, ballots cast in non-VCA counties.
- Approximately 1 thousand, or $0.0 \%$, ballots cast in VCA counties were cast via Nonprovisional CVR ballot compared to 105 , or $0.0 \%$, ballots in non-VCA counties.

## II. AAPI Voters Subethnic Group

i. Chinese voters comprised the largest percentage of the $\mathbf{3 . 6}$ million registered AAPI voters statewide during the $\mathbf{2 0 2 2}$ Primary Election.

- Chinese voters represented over 970 thousand, or $25.8 \%$, statewide registered AAPI voters.
- Filipino voters represented 611 thousand, or $16.6 \%$, statewide registered AAPI voters.
- All 'other' voters represented 588 thousand, or $15.9 \%$, statewide registered AAPI voters.
- Indian voters represented 539 thousand, or $14.6 \%$, statewide registered AAPI voters.
- Vietnamese voters represented 525 thousand, or $14.2 \%$, statewide registered AAPI voters.
- Korean voters represented 293 thousand, or $7.9 \%$, statewide registered AAPI voters.
- Japanese voters represented 163 thousand, or $4.4 \%$, statewide registered AAPI voters.
ii. Chinese voters comprised the largest percentage of the 1.1 million ballots cast by AAPI voters statewide during the $\mathbf{2 0 2 2}$ Primary Election.
- Approximately 304 thousand, or $27.6 \%$, of the ballots came from Chinese voters.
- Approximately 198 thousand, or $18.0 \%$, of the ballots came from all 'other' voters.
- Approximately 169 thousand, or $15.4 \%$, of the ballots came from Filipino voters.
- Approximately 141 thousand, or $12.8 \%$, of the ballots came from Vietnamese voters.
- Approximately 140 thousand, or $12.7 \%$, of the ballots came from Indian voters.
- Approximately 80 thousand, or $7.3 \%$, of the ballots came from Korean voters.
- Approximately 69 thousand, or $6.3 \%$, of the ballots came from Japanese voters.
iii. There was significant variation in turnout across AAPI subethnic groups during the 2022 Primary Election.
- Most notably between Japanese voters, who had the highest turnout among subethnic AAPI groups, and Indian voters, who had the lowest turnout among subethnic groups.
- Voters estimated to be Japanese had a turnout rate of $42.4 \%$
- Voters estimated to be Chinese had a turnout rate of $31.4 \%$
- Voters estimated as all 'other' had a turnout rate of $33.8 \%$
- Voters estimated to be Filipino had a turnout rate of $27.7 \%$
- Voters estimated to be Korean had a turnout rate of 27.5\%
- Voters estimated to be Vietnamese had a turnout rate of $26.9 \%$
- Voters estimated to be Indian had a turnout rate of $26.0 \%$
x. The vast majority of AAPI voters utilized vote-by-mail to participate in the 2022 Primary Election.
- Indian voters cast approximately 132 thousand, or $94.4 \%$, of ballots via vote-by-mail.
- Japanese voters cast approximately 65 thousand, or $94.2 \%$, of ballots via vote-by-mail.
- Chinese voters cast approximately 286 thousand, or $94.2 \%$, of ballots via vote-by-mail.
- Vietnamese voters cast approximately 133 thousand, or $94.1 \%$, of ballots via vote-by-mail.
- Filipino voters cast approximately 159 thousand, or $93.9 \%$, of ballots via vote-by-mail.
- Korean voters cast approximately 75 thousand, or $93.9 \%$, of ballots via vote-by-mail.
- 'Other' voters approximately cast 181 thousand, or $91.2 \%$, of ballots via vote-by-mail.

## III. American Indian and Alaska Native (AIAN) Classified Voters

i. AIAN-classified voters comprised $\mathbf{0 . 3 2 \%}$ of the statewide registered electorate at the time of the $\mathbf{2 0 2 2}$ Primary Election. ${ }^{7}$

- Approximately 69 thousand, or $0.32 \%$, statewide voters were classified as AIAN.
- VCA counties accounted for $70.4 \%$ of the state's AIAN-classified voters.
ii. AIAN-classified voters accounted for approximately 24 thousand, or $\mathbf{0 . 3 4 \%}$, of the statewide ballots cast during the $\mathbf{2 0 2 2}$ Primary Election.
- VCA counties accounted for $78.4 \%$ of the state's AIAN ballots cast.
iii. During the $\mathbf{2 0 2 2}$ Primary Election, AIAN-classified voters had a statewide turnout rate of $\mathbf{3 4 . 9 \%}$ - higher than the statewide average of $\mathbf{3 3 . 0 \%}$.
- In VCA counties, the AIAN turnout rate of $38.9 \%$ was $4 \%$ higher than the AIAN statewide turnout rate of $34.9 \%$.
- In non-VCA counties, the AIAN turnout rate of $25.5 \%$ was $9.4 \%$ lower than the AIAN statewide turnout rate of $34.9 \%$.

[^2]iv. Across the state, the vast majority of AIAN-classified voters utilized vote-by-mail to participate in the $\mathbf{2 0 2 2}$ Primary Election.

- Approximately 22 thousand, or $93.1 \%$, ballots were cast via vote-by-mail.
- Approximately one thousand, or $4.1 \%$, ballots were cast via vote center.
- 591 , or $2.4 \%$, ballots were cast via polling place.
- 42 , or $0.1 \%$, ballots were cast via provisional CVR ballot.
- 5 ballots were cast via Nonprovisional CVR ballot.
v. In VCA counties, the vast majority of AIAN-classified voters also utilized vote-by-mail to participate in the $\mathbf{2 0 2 2}$ Primary Election.
- Approximately 18 thousand, or $94.48 \%$, ballots were cast via vote-by-mail in VCA counties compared to the approximately 4,665 , or $88.89 \%$ ballots cast in non-VCA counties.
- Approximately one thousand, or $5.33 \%$, ballots were cast via vote center in VCA counties compared to 0 , or $0.00 \%$, ballots cast in non-VCA counties.
- Approximately 0 , or $0.00 \%$ ballots were cast in VCA counties via polling place compared to 591 , or $11.22 \%$, ballots cast via polling place in non-VCA counties.
- Approximately 32 , or $0.17 \%$, ballots were cast via CVR ballot in VCA counties compared to the 10 , or $0.19 \%$ ballots cast via CVR in non-VCA counties.
- Approximately five, or $0.03 \%$, ballots were cast via Nonprovisional CVR ballot in VCA counties compared to 0 nonprovisional CVR ballots cast in non-VCA counties.

## IV. Voters by Age Categorization

i. Voters aged 30 to 49 made up the largest percentage of registered voters statewide during the 2022 Primary Election.

- Approximately 7.2 million, or $33.1 \%$, voters were aged 30 to 49 .
- Approximately 5.2 million, or $23.9 \%$, voters were aged 50 to 64 .
- Approximately 5.0 million, or $22.9 \%$, voters were aged 65 and over.
- Approximately 4.4 million, or $20.1 \%$, voters were aged 18 to 29 .
ii. Voters aged 65 and over accounted for the largest number of ballots cast during the 2022 Primary Election.
- Voters aged 18 to 29 represented approximately 636 thousand, or $8.8 \%$, of statewide ballots cast.
- Voters aged 30 to 49 represented approximately 1.6 million, or $23.0 \%$, statewide ballots cast.
- Voters aged 50 to 64 represented approximately 2.0 million, or $28.1 \%$, of statewide ballots cast.
- Voters aged 65 and over represented approximately 2.9 million, or $40.1 \%$, of statewide ballots cast.
iii. Voters aged 65 and over had a turnout rate of $57.8 \%$ - the highest of any age group during the 2022 Primary Election.
- Voters aged 50 to 64 had a turnout rate of $38.8 \%$.
- Voters aged 30 to 49 had a turnout rate of $23.0 \%$.
- Voters aged 18 to 29 had a turnout rate of $14.4 \%$.
iv. In VCA counties, voter turnout rates increase as voters get older. Voters aged 65 and over accounted for largest voter turnout rates during the $\mathbf{2 0 2 2}$ Primary Election.
- Voters aged 18 to 29 had a turnout rate of $14.9 \%$ compared to a voter turnout rate of $12.9 \%$ in non-VCA counties.
- Voters aged 30 to 49 had a turnout rate of $23.3 \%$ compared to a voter turnout rate of $21.9 \%$ in non-VCA counties.
- Voters aged 50 to 64 had a turnout rate of $38.8 \%$ compared to a voter turnout rate of $38.9 \%$ in non-VCA counties.
- Voters aged 65 and over had a turnout rate of $57.2 \%$ compared to a voter turnout rate of $59.6 \%$ in non-VCA counties.
v. Voters of all age groups widely preferred voting by mail to participate in the $\mathbf{2 0 2 2}$ primary.
- Voters aged 65 and over cast approximately 2.7 million, or $93.4 \%$, ballots via vote-by-mail.
- Voters aged 18 to 29 cast approximately 581 thousand, or $91.4 \%$, ballots via vote-by-mail.
- Voters aged 30 to 49 cast approximately 1.5 million, or $90.6 \%$, ballots via vote-by-mail.
- Voters aged 50 to 64 cast approximately 1.8 million, or $89.8 \%$, ballots via vote-by-mail.

## V. Voters by Language Categorization

i. Voters registered with an English language preference made up $\mathbf{9 5 . 1 \%}$ of all VCA-registered voters in the $\mathbf{2 0 2 2}$ Primary election.

- Approximately 15.9 million, or $95.1 \%$ of VCA voters were registered in English.
- Approximately 507 thousand, or $3.03 \%$ of VCA voters, were registered in Spanish.
- Approximately 830 thousand, or $4.88 \%$ of VCA voters were registered in a language other than English.
ii. Of the 16.7 million registered voters in VCA counties, nearly 5.6 million, or $\mathbf{3 3 . 3 \%}$, were born abroad.
- Among VCA voters born abroad, 4.8 million, or $86.6 \%$, were registered to vote in English. Over 747 thousand, or $13.4 \%$, were registered to vote in a language other than English.
- Among VCA voters born in the United States, 11 million, or $99.4 \%$, were registered to vote in English, while 72,588 , or $0.65 \%$, were registered to vote in a language other than English.
iii. In VCA counties, voters registered with a Vietnamese language preference had a turnout rate of $35.3 \%$ - the highest turnout of any language group.
- VCA voters registered in English had a turnout rate of 33.4\%
- VCA voters registered in Spanish had a turnout rate of $21.4 \%$
- The language group with the lowest turnout was Khmer, with a turnout rate of $19.3 \%$.
iv. VCA voters registered in both English and non-English languages preferred voting by mail to participate in the $\mathbf{2 0 2 2}$ Primary Election.
- Approximately 4.8 million, or $91.3 \%$ of VCA voters registered in English, voted by mail.
- Approximately 188 thousand, or $92.0 \%$ of VCA voters, registered in a language other than English voted by mail.

## VI. Voting by Mail

i. Of the 7.2 million ballots votes cast statewide, 6.6 million, or $91.6 \%$, were cast as a mail ballot. Over 3.3 million, or $50.8 \%$, of all mail ballots were returned via mail.

- Voters estimated to be white cast approximately 1.8 million, or $51.0 \%$, mail ballots via mail.
- Voters estimated to be Black cast approximately 144 thousand, or $49.9 \%$, mail ballots via mail.
- Voters estimated to be Latino cast approximately 647 thousand, or $49.0 \%$, mail ballots via mail.
- Voters estimated to be AAPI cast approximately 556 thousand, or $53.8 \%$, mail ballots via mail.
- Voters estimated to be 'Other' cast approximately 200 thousand, or $48.6 \%$, mail ballots via mail.

## UNDERSTANDING VOTER TURNOUT GAPS

The following section discusses the existence of voter turnout gaps by race and ethnicity and provides the context for voter statistics to be analyzed. This section provides an academic literature review on the topic of voter turnout gaps and is included in all VCA counties reports. ${ }^{8}$

Scholars of American electoral politics have sought to understand the reasons that individuals participate in elections and why turnout gaps exist between electorates of different races. These political scientists ultimately find that political campaigns often categorize racial/ethnic minorities as low-propensity voters unlikely to determine election outcomes. ${ }^{9}$ Other research documents that many non-white voters feel disconnected from the political system and do not see politicians as responsive to their community needs, leading to lower turnout. Voters of color are frequently regarded as low-propensity voters due to various factors. For example, because of their relative youth and foreign-born status, many Latino and AAPI voting-eligible citizens enter the electorate as first-time voters that have not previously participated in an election.

The resulting consequence is that numerous individuals of color are on the voter rolls but with little-to-no vote history. As such, they are often overlooked by campaign outreach efforts. ${ }^{10}$ In other words, when campaigns plan outreach strategies, they often direct fewer resources to less reliable voters with low vote history scores. This begins the cycle of "under mobilization," in which voters of color are less likely to be targeted for get-out-the-vote campaigns, further depressing minority voting. ${ }^{11}$ While election rules and structural changes also constrain or encourage voter turnout, there has been a well-documented differential turnout rate by racial groups for the entire political history of America. Still, political scientists recommend that election administrators do what they can to make voting more accessible to encourage increased turnout and equity across groups.

The persistent turnout gap ${ }^{12}$ suggests that more than the removal of structural barriers may be required to eliminate the gap between the turnout of white voters and other groups. County election offices and candidates for office must increase outreach and contact with Black, Latino, and AAPI voters. If voters are not regularly contacted, they are less likely to vote. A Pew Research Center study found that during the 2020 Election, highly engaged voters reported they were frequently contacted by campaigns. Whereas some non-voters reported not receiving any campaign communication or only one type of communication. ${ }^{13}$ Furthermore, contact with minority voters must be culturally appropriate and incorporate more racially diverse contact from Black, Latino,

[^3]and AAPI staff to ensure this outcome. All voters are more likely to be persuaded by outreach that comes from other community members or people they can relate to, and it helps generate a sense of inclusion, especially for historically excluded communities.

Whatever changes are implemented to the administration of California elections, including the widespread adoption of California's Voter's Choice Act (VCA), habitual voters and those voters most targeted by campaigns are likely to stay up-to-date and continue casting their ballots. By contrast, first-time and lowpropensity voters are sometimes deterred by the complex and changing electoral process. Tufts University's Center for Information \& Research on Civic Learning and Engagement released a poll showing that young people need timely and relevant access to voting information or may not vote. ${ }^{14}$ Even if changes are meant to encourage participation, documented research shows that voters with low awareness of political news may not understand the changes and may need more time and outreach to vote at higher rates.

[^4]
## INTRODUCTION

This report, commissioned by the California Secretary of State's office pursuant to California Elections Code, provides a comprehensive overview of voting in California Voter's Choice Act (VCA) counties during the 2022 Primary Election. California Elections Code Section $4005(\mathrm{~g})(1)(\mathrm{A})$ states that, within six months of each election, the Secretary of State will report voter statistics ${ }^{15}$ across race, ethnicity, language preference, age, gender, disability, permanent vote-by-mail status, historical polling place voters, political party affiliation, and language minorities.

Signed into law in 2016, the California Voter's Choice Act (VCA) ushered in an election model used by twentyseven counties during the 2022 Primary Election: Alameda; Amador; Butte; Calaveras; El Dorado; Fresno; Kings; Los Angeles; Madera; Marin; Mariposa; Merced; Napa; Nevada; Orange; Riverside; Sacramento; San Benito; San Diego; San Mateo; Santa Clara; Santa Cruz; Sonoma; Stanislaus; Tuolumne; Ventura; and Yolo. Designed to provide greater flexibility and convenience for voters, this new election model allows voters to choose how, when, and where to cast their ballot. This election model expanded early voting opportunities and methods for voters to return their ballots.

Under the VCA, each voter is mailed a ballot which they can then return by mail, to a secure drop box, or at a vote center. Voters may also cast a ballot at any vote center within their county or through other expanded inperson early voting options.

Pursuant to Proposition 14, passed in 2010, California uses a nonpartisan blanket primary for its races. ${ }^{16}$ All candidates for voter-nominated offices are listed on one ballot, and only the top two vote-getters in the primary election - regardless of party preference - move on to the general election. Prior to the Top Two Candidates Open Primary Act, the top vote-getter from each qualified political party, as well as any write-in candidate who received a certain percentage of votes, moved on to the general election. The Top Two Candidates Open Primary Act does not apply to candidates running for U.S. President, county central committee, or local office. Write-in candidates for voter-nominated offices can only run in the primary election. A write-in candidate will only move on to the general election if the candidate is one of the top two vote-getters in the primary election.

Consistent with past publications ${ }^{17}$, this report evaluates voter registration and participation across essential characteristics to assess standards of equity in the primary election held by VCA counties. The purpose of this analysis is to determine shortcomings in voter engagement and identify opportunities for targeted voter mobilization for future elections.

[^5]
## METHODOLOGY

The purpose of this report is to provide a detailed analysis of voter registration and turnout rates for the 2022 Primary Election in California's twenty-seven Voter's Choice Act (VCA) counties. No state requirement exists to self-report race or ethnicity when registering to vote. As a result, the state's centralized voter registration database, VoteCal, does not capture comprehensive data on voters' racial and ethnic backgrounds. At the time of the 2022 Primary Election, approximately 6.9 million, or $25.9 \%$, of the 21.9 million registered voters selfreported their race and ethnicity. To provide a more accurate understanding of the electorate in California, we utilized Bayesian Improved Surname Geocoding (BISG) to improve report estimates on California voters that do not self-report race and ethnicity.

## Bayesian Improved Surname Geocoding (BISG)

BISG was developed by demographic experts and has been widely published and applied in the domain of public health. ${ }^{18}$ Our BISG models are compared to self-reported race data included in the voter file to assess predictive accuracies and further improve techniques. The method relies on a combination of census surname analysis and census block-level racial demographics to provide an overall probability assessment of the voter's race or ethnicity. ${ }^{19}$ Demographers and social scientists already utilize both of these methods separately; matching census data to geographic units is widely used for understanding racial demographics and density of an area ${ }^{20}$, and surname analysis is regularly used against the voter file to understand race and ethnicity. ${ }^{21}$ Using both data sources makes it possible to gain a more precise understanding of voter demographics-two pieces of evidence, instead of just one, provides far more reliable estimates. ${ }^{22}$

BISG analysis begins by undertaking the surname analysis. Surname analysis in BISG starts by taking each last name in the voter file and checking it against the published directories created by the Census Bureau. ${ }^{23}$ This list, assembled based on research by demographers at the Census Bureau, has created a racial/ethnic probability for each last name in the United States based on the official census records. ${ }^{24}$ When a person fills out the census, they record their last name and their self-reported race and ethnicity. ${ }^{25}$ The resulting probability estimate for

[^6]each name can then be cross-referenced with the voter file. So, a surname database can assign a probability for nearly every last name found on a voter file.

The second step of BISG relies on the address of the voter from the publicly available voter file. ${ }^{26}$ Using a procedure known as geocoding, this address information can be cross-referenced with the data from the decennial census at the block level. ${ }^{27}$ The census data contains the self-reported race of residents, aggregated to the census block level. Using census statistics for the racial and ethnic composition for the block in which a voter resides, the block's racial demographic percentages can be used to refine the initial estimate of voter race by surname alone. ${ }^{28}$ By using a smaller level of aggregation (i.e., census block), researchers have more precision in their racial estimates. ${ }^{29}$

BISG uses the two proxy sources of voter race information - a voter's name and where they live-to generate an estimate of their race. By employing the Who Are You (WRU) R package in RStudio to estimate the probability that a voter is of a certain race, a more detailed analysis can be inferred from the combination of surname and geolocation data-as opposed to using just one or the other. ${ }^{3031}$

## Asian American and Pacific Islander (AAPI) Subethnic Modeling

In addition to utilizing BISG to improve voter race and ethnicity estimates, we used AAPI subethnic modeling to report detailed estimates for Chinese, Filipino, Indian, Japanese, Korean, Vietnamese, and 'Other' AAPI subethnicities. Other AAPI subethnicities can include Hmong, Cambodian, Pakistani, Laotian, Thai, and others.

AAPI subethnic modeling begins by sorting out registered voters that self-report as AAPI and non-selfreporting voters whose highest racial/ethnic predicted probability was AAPI. We then check the birthplace of these voters to determine if they were born in an Asian country. Voters born internationally are given indicators based on their Asian country of origin.

The remaining AAPI voters' surnames are matched to a modified AAPI surname list. ${ }^{32}$ Any voters who do not match the Chinese, Filipino, Indian, Japanese, Korean, and Vietnamese surname list are given predicted subethnic probabilities that match the demographic makeup of the census tract that they live in.

[^7]
## American Indian and Alaska Native (AIAN) Classification

This report also describes voter participation for AIAN voters. To report these estimates, we assign an indicator for voters that self-report as American Indian and Alaska Native. Next, we conduct a spatial overlay of voters' geolocation and American Indian tribal boundaries in California. If voters are geolocated as living on an American Indian reservation, they are given an indicator to classify them as AIAN. Using a simple Pearson correlation test, we determined that voters that self-report as AIAN and live within AIAN tribal boundaries are significantly correlated with a correlation coefficient of .889 (i.e., $88.9 \%$ ).

## Data Sources

VoteCal Data: This report utilizes voter data from VoteCal, California's single uniform, centralized voter registration database. This data includes information about voter registration, voter participation method, voter participation, and identifying voter characteristics.

2020 Decennial Census P.L. 94-171 Redistricting Data: We use 2020 Census data which contains the joint distribution of individual characteristics, including age, gender, and race, at the levels of various geographical units. The summary file contains raw counts of individuals, which we aggregate by various geographical units, including county, tract, block group, and block levels.

2010 Census Surname List: The Census Bureau provides data on the racial distribution of surnames in the United States. In 2016, the Census Bureau released the percent of individuals who are white, Black, Latino, AAPI, and so on for each surname occurring at least 100 times in the 2010 Census. We supplement this list with Census's Spanish Surname List, which contains the most common Latino surnames expanded from the 2010 Census Surname List.

Asian American Subethnic Surname List: Using a modified surname list, we provide a model for identifying Asian American voters by major subethnic groups. The derivation of the lists is from academic literature on the topic, most prominently described in Lauderdale DS, Kestenbaum B. Asian American ethnic identification by surname. Population Research and Policy Review. 2000;19:283-300.

2020 Census Bureau American Indian/Alaska Native/Native Hawaiian (AIANNH) Areas: In order to provide further analysis of voting patterns of Indigenous Americans, we used a spatial overlay technique that cross-referenced voter addresses with the U.S. Census Bureau TIGER/Line Shapefile, 2020, Nation, U.S., American Indian/Alaska Native/Native Hawaiian (AIANNH) Areas.

## Additional Notes

Our analysis divides race into five categories: White, Black, Latino, AAPI, and Other. These racial groups are similar to those used in the Census data and self-reported race in the voter files. The major difference is that

American Indian/Alaska Native and multi-racial individuals are included with Other. The groups categorized in Other jointly constitute less than $6.5 \%$ of records in the California voter file.

## VOTER CHARACTERISTICS AND PATTERNS

## Introduction

This section examines voter registration and participation across all California counties combined (statewide), non-Voter's Choice Act counties, and Voter's Choice Act counties. Our analysis is divided into five categories $-1)$ all voters by race and ethnicity, 2) AAPI voters by subethnicity, 3) AIAN-classified voters, 4) all voters by age categorization, and 5) voters by primary language group. For these categories, we provide insight into the following:

- Number of registered voters
- Number of ballots cast
- Turnout rate
- Methods of participation

All BISG, AAPI subethnic, and AIAN estimates for registered voters were applied to the 2022 California Primary Election voter file extracted on January 3, 2023. Exact registration figures and estimates from the 2022 Primary Election are subject to change since the California voter file is constantly maintained as voters move and become deceased. Regardless of minor changes in the raw number of registered voters, all percent estimates should be correct within a tenth of a decimal point.

In the paragraphs for the subject tables below, we present findings for 'statewide,' which is all fifty-eight California counties aggregated; 'non-VCA,' which includes the thirty-one California counties that have not adopted the VCA voter model; and 'VCA (including Los Angeles),' which represented the aggregated estimates across all twenty-seven VCA counties. We also include 'VCA (excluding Los Angeles),' which includes the aggregated VCA totals that exclude Los Angeles County since it represents over $26 \%$ of the VCA registered voter count and can slightly skew observations.

## Voters by Race and Ethnicity

Using self-reported data and BISG modeling, we analyzed the California electorate by race and ethnicity. We provide data on each of the fifty-eight California counties and group counties into categories of 'statewide,' nonVCA, VCA (including Los Angeles), and VCA (excluding Los Angeles).

As shown in Table 1 below, there were approximately 21.9 million registered voters during the 2022 Primary Election. Nearly 8.7 million, or $39.7 \%$, of all California voters were estimated to be white. The second largest estimated group was Latinos, representing over 6.9 million, or $31.9 \%$, of California's registered electorate. AAPI voters are estimated to be the third largest demographic in the state's registered electorate, making up nearly 3.6 million, or $16.8 \%$. Voters estimated to be Black comprised 1.1 million, or $5.3 \%$, of the state's registered voters. 'Other' voters, which include individuals estimated to be AIAN or multi-racial, were nearly 1.3 million, or $6.2 \%$, of all registered voters.

Table 1 also shows that over 5.1 million registered voters lived in the thirty-one counties that have not adopted the VCA voting model, referred to below as non-VCA. Across the non-VCA counties, more than 2.2 million, or $43.1 \%$, of voters were estimated to be white. Voters estimated to be Latino represented nearly 1.6 million, or $31.7 \%$, of the non-VCA registered electorate. The third largest estimated demographic group was AAPI voters, who comprised over 651 thousand, or $12.6 \%$, of non-VCA registered voters. Voters estimated to be Black were 274 thousand, or $5.3 \%$, of the non-VCA electorate. All 'other' voters comprised the final 372 thousand, or $7.2 \%$ of non-VCA registered voters.

VCA counties' totals are shown in Table 1 below. As of the 2022 Primary Election, there were nearly 16.7 million registered voters in VCA counties. The registered electorate in VCA counties was primarily comprised of voters estimated to be white, who made up over 6.4 million, or $38.7 \%$. The second largest demographic in VCA counties were voters estimated to be Latino, with more than 5.3 million voters, or $32.0 \%$ of the electorate. Voters estimated as AAPI comprised over 3.0 million, or $18.1 \%$, of all VCA registered voters. Black voters were estimated to comprise over 877 thousand, or $5.2 \%$, of VCA registered voters. All 'other' voters accounted for the remaining 989 thousand, or $5.9 \%$, of registered voters in VCA counties.

Table 1: Registered Voters by Race and Ethnicity ${ }^{33}$

| Jurisdiction | Total | White |  | Latino |  | AAPI |  | Black |  | Other |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Statewide | $21,902,922$ | $8,703,339$ | $39.7 \%$ | $6,995,224$ | $31.9 \%$ | $3,690,502$ | $16.8 \%$ | $1,151,871$ | $5.3 \%$ | $1,361,986$ |  |
| Non-VCA | $5,159,996$ | $2,224,917$ | $43.1 \%$ | $1,635,385$ | $31.7 \%$ | 651,872 | $12.6 \%$ | 274,864 | $5.3 \%$ | 372,958 |  |
| VCA (Including <br> Los Angeles) | $16,742,926$ | $6,478,422$ | $38.7 \%$ | $5,359,839$ | $32.0 \%$ | $3,038,629$ | $18.1 \%$ | 877,007 | $5.2 \%$ | 989,028 |  |

[^8]| Jurisdiction | Total | White |  | Latino |  | AAPI |  | Black |  | Other |  |

Table 2 below shows that over 7.2 million voters across California participated in the 2022 Primary Election. Of those that cast a ballot, more than 3.8 million, or $54 \%$, were estimated to be white. Voters estimated to be Latino accounted for nearly 1.4 million, or $20 \%$, of the ballots cast statewide. AAPI estimated voters made up 1.1 million, or $5.3 \%$, of the ballots cast in the primary election. Voters estimated to be Black comprised 322 thousand, or $4.5 \%$, of all participating voters. All 'other' voters made up the remaining 453 thousand, or $6.0 \%$, of ballots cast statewide.

Table 2 below shows that nearly 1.69 million voters across non-VCA counties cast a ballot in the 2022 Primary Election. The largest demographic group in non-VCA counties is estimated to be white voters, who made up 975 thousand, or $57.5 \%$, of participating voters. Voters estimated to be Latino made up 321 thousand, or $19.0 \%$, of the ballots cast in non-VCA counties. AAPI estimated voters accounted for 204 thousand, or $12.1 \%$, of the non-VCA ballots cast. In non-VCA counties, 70 thousand, or $4.2 \%$, ballots were cast by voters estimated to be Black. All 'other' voters made up the final 124 thousand or $7.3 \%$ of ballots cast in non-VCA counties.

VCA counties' ballot totals are shown in Table 2 below. In the 2022 Primary Election, over 5.5 million ballots were cast in VCA counties. Participating voters in VCA counties were primarily comprised of voters estimated to be white, who accounted for nearly 2.8 million, or $52.3 \%$, of ballots cast. The next largest demographic in VCA counties were voters estimated to be Latino, with nearly 1.1 million voters, or $21.0 \%$ of the ballots cast. Voters estimated as AAPI made up 899 thousand, or $16.3 \%$, of all VCA participating voters. Black voters were estimated to make up 252 thousand, or $4.6 \%$, of VCA ballots cast. All 'other' voters accounted for the remaining 328 thousand, or $5.9 \%$, of ballots cast in VCA counties.

Table 3 below shows turnout rates for California statewide. ${ }^{34}$ Across all fifty-eight California counties, voters had an overall turnout rate of $33 \%$. Voters estimated to be white have the highest turnout rate among any

[^9]racial/ethnic group, with $44.4 \%$ of voters participating in the 2022 Primary Election. Voters estimated to be Latino had a turnout rate of $21.2 \%$ - the lowest turnout rate of any group. Voters estimated to be AAPI had a turnout rate of $29.9 \%$ in the 2022 Primary Election. There was a $28.0 \%$ turnout rate among voters estimated to be Black. All 'other' voters had a turnout rate of $33.3 \%$ across the state.

Below in Table 3 are turnout rates for non-VCA counties. Across all thirty-one non-VCA counties, voters had an overall turnout rate of $32.9 \%$. Voters estimated to be white have the highest turnout rate of any racial/ethnic group, with $43.8 \%$ of voters participating in the 2022 Primary Election. The lowest turnout rate of any group is among voters estimated to be Latino, with a turnout rate of $19.7 \%$. Voters estimated to be AAPI had a turnout rate of $31.4 \%$ in the 2022 Primary Election. Among voters estimated as Black, there was a $25.7 \%$ turnout rate. All 'other' voters had a turnout rate of $33.3 \%$ in non-VCA counties.

In Table 3 are turnout rates for VCA counties. Across all twenty-seven VCA counties, voters had an overall turnout rate of $33.1 \%$. Voters estimated to be white have the highest turnout rate among any racial/ethnic group, with $44.7 \%$ of voters participating in the 2022 Primary Election. Voters estimated to be Latino had a turnout rate of $21.6 \%$ - the lowest turnout rate of any group. Voters estimated to be AAPI had a turnout rate of $29.6 \%$ in the 2022 Primary Election. There was a $28.8 \%$ turnout rate among voters estimated to be Black. All 'other' voters had a turnout rate of $33.3 \%$ across VCA counties.

Table 4 below shows the voting methods used by each racial and ethnic group during the 2022 Primary Election. Below the table shows that vote-by-mail was the overall preferred method of voting for statewide voters ( 6.6 million or $91.6 \%$ ) and preferred by white ( 3.5 million or $92.1 \%$ ), Black ( 289 thousand or $89.8 \%$ ), Latino ( 1.3 million or $89.2 \%$ ), AAPI ( 1.0 million or $93.6 \%$ ), and all 'other' voters ( 413 thousand or $91.3 \%$ ). The following most utilized method was voting in person at a vote center, with 471 thousand or $6.5 \%$ of voters using the method statewide. Vote centers were commonly used by white ( 228 thousand or $5.9 \%$ ), Black ( 26 thousand or $8.2 \%$ ), Latino ( 130 thousand or $8.8 \%$ ), AAPI ( 57 thousand or $5.2 \%$ ), and all 'other' voters ( 28 thousand or $6.4 \%$ ) across California. In-person voting at a polling place and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and vote centers. Approximately 127 thousand, or $1.8 \%$, statewide ballots were cast in a polling place. Only 1,161 ballots were cast via a non-provisional CVR ballot. The remaining 10 thousand, or $0.1 \%$, statewide votes were cast using a CVR ballot.

In Table 4 below, we see that vote-by-mail was the overall preferred method of voting for non-VCA voters with an approximately ( 1.5 million or $92.4 \%$ ). The preferred method by white voters was also the vote-by-mail method with approximately ( 901 thousand or $92.4 \%$ ), Black ( 64 thousand or $91.5 \%$ ), Latino ( 294 thousand or $91.6 \%$ ), AAPI (192 thousand or $94.2 \%$ ), and all 'other' voters (114 thousand or $91.8 \%$ ) across non-VCA counties. The next most utilized method was voting in person at a polling place, with 126 thousand, or $7.5 \%$, of voters using the method in non-VCA. Polling places were commonly used by white ( 72 thousand or $7.5 \%$ ), Black ( 5 thousand or $8.4 \%$ ), Latino ( 26 thousand or $8.3 \%$ ), AAPI (11 thousand or $5.7 \%$ ), and all 'other' voters (10 thousand or $8.0 \%$ ) across non-VCA counties. In-person voting at a vote center and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and polling places.
Approximately 1.8 thousand, or $0.1 \%$, statewide ballots were cast using a CVR ballot. Only 118 ballots were cast via a non-provisional CVR ballot and vote center.

Table 4 also shows that vote-by-mail was the most selected method of voting for VCA voters ( 5.0 million or $91.3 \%$ ) and preferred by white ( 2.6 million or $92.0 \%$ ), Black ( 225 thousand or $89.3 \%$ ), Latino ( 1.0 million or
$88.5 \%$ ), AAPI ( 840 thousand or $93.5 \%$ ), and all 'other' voters (299 thousand or $91.1 \%$ ) across VCA counties. Casting a ballot at a vote center was the following most utilized method, with 471 thousand, or $8.5 \%$, of voters using the method in non-VCA. Vote centers were commonly used by white (228 thousand or $7.9 \%$ ), Black ( 26 thousand or $10.5 \%$ ), Latino (130 thousand or 11.3\%), AAPI (57 thousand or 6.3\%), and all 'other' voters (28 thousand or $8.8 \%$ ) across VCA counties. In-person voting at a polling place and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and vote centers. Approximately 8 thousand, or $0.2 \%$, statewide ballots were cast using a CVR ballot. Only 1,313 ballots were cast via a nonprovisional CVR ballot and polling place.

## Takeaways

Voters in VCA counties represented approximately 16.7 million, or $76.4 \%$, of the 21.9 million statewide registered voters. The remaining 5.2 million, or $23.6 \%$, of California statewide voters, come from non-VCA counties. California has a diverse electorate, with more than half of the state's registered voters collectively represented by communities of color such as Latino, AAPI, Black, and all 'other' non-white voters. Regardless of categorization, California statewide, non-VCA counties, or VCA counties, voters of color comprise the majority of the state's registered electorate. Across the mentioned categories, white voters made up most of the registered voters, followed by Latino voters, then AAPI voters, next black voters, and finally, all 'other' voters.

More than 7.2 million voters participated in the 2022 Primary Election in California. Of those that voted, approximately 5.5 million, or $76.5 \%$, of statewide ballots came from voters in VCA counties. The remaining nearly 1.7 million, or $23.5 \%$, of ballots came from non-VCA counties. Unlike the distribution of registered electorate, voters estimated to be white comprised more than half of the ballots cast statewide, and in non-VCA and VCA counties.

Theoretically, one determinant of equitable voting practices should be that groups represented the same percentage of registered voters and ballots cast. For example, if $40.0 \%$ of the registered electorate is comprised of voters estimated to be white, then $40.0 \%$ of statewide ballots should be cast by white voters. Any percentage lower would indicate underrepresentation and low engagement, and any percentage higher would indicate overrepresentation - meaning that other groups are underrepresented. With that explained, California has an overrepresentation of white voters and an underrepresentation of Latino, AAPI, and Black voters. Most notably, Latinos are underrepresented by approximately 10-points in their percentage of ballots cast relative to their representation of registered voters.

Across the state, there was a $33 \%$ turnout rate during the 2022 Primary Election. There was a slight variation across county categorization, with a $32.9 \%$ turnout rate in non-VCA counties and a $33.1 \%$ turnout rate in VCA counties. On average, voters estimated to be white had a turnout rate in the forty-four percentage. Latino, AAPI, Black, had turnout rates lower than the statewide, non-VCA, and VCA counties' averages. Most notably, voters estimated to be Latino had the lowest turnout rate of any group and routinely fell nearly 10-points lower than collective averages.

Regardless of statewide, non-VCA, or VCA categorization, the vast majority -90\% or above - of voters across the state utilized vote-by-mail to participate in the 2022 primary. There is a slight observable pattern with Latino and Black voters casting ballots in person at polling places and voter centers. Latino and Black voters used in-person voting at 1 - to 3.5 -points higher rates than their white, AAPI, and 'other' counterparts.

## Asian American and Pacific Islander (AAPI) Subethnicities

Using self-reported data and AAPI subethnic modeling, we analyzed the AAPI electorate by subethnic groups, including Chinese, Filipino, Indian, Japanese, Korean, Vietnamese, and 'Other' groups. We provide data on each of the fifty-eight California counties and group counties into categories of 'statewide,' non-VCA, VCA (including Los Angeles), and VCA (excluding Los Angeles). Our AAPI subethnic modeling is covered in greater detail in the methodology section of this report.

As shown in Table 5 below, more than 970 thousand registered voters were estimated to be Chinese, or $26.3 \%$ of all AAPI registered voters, at the time of the 2022 Primary Election. Approximately 611 thousand, or $16.6 \%$, statewide AAPI registered voters were estimated to be Filipino. The third largest estimated AAP subethnic group was Indian voters, representing 539 thousand, or $14.6 \%$, of California's registered AAPI electorate. Voters estimated to be Vietnamese made up nearly 525 thousand, or $14.2 \%$. Voters estimated to be Korean comprised 293 thousand, or $7.9 \%$, of the state's registered AAPI voters. At the time of the 2022 Primary Election, voters estimated to be Japanese accounted for 163 thousand, or $4.4 \%$, of statewide AAPI voters. 'Other' voters, which include individuals estimated to be Pacific Islanders or any other AAPI subethnic group not explicitly listed, were nearly 588 thousand, or $15.9 \%$, of all registered AAPI voters.

Table 5 shows that, in non-VCA counties, approximately 198 thousand, or $30.4 \%$ of registered AAPI voters, were estimated to be Chinese. Across the non-VCA counties, 134 thousand, or $20.6 \%$, of AAPI voters were estimated to be Filipino. Voters estimated to be Indian represented 109 thousand, or $16.8 \%$, of the non-VCA registered AAPI electorate. More than 48 thousand, or $7.4 \%$, of non-VCA AAPI registered voters were Vietnamese. Voters estimated to be Korean accounted for 30 thousand, or $4.7 \%$, of the non-VCA AAPI electorate. Voters are estimated to be Japanese made up 22 thousand, or $3.5 \%$, of AAPI registered voters. All 'other' AAPI voters comprised the final 107 thousand, or $16.5 \%$ of non-VCA AAPI registered voters.

AAPI subethnic totals for VCA counties are shown in Table 5 below As of the 2022 Primary Election, 771 thousand, or $25.4 \%$ of AAPI registered voters, were estimated to be Chinese. Voters estimated to be Filipino accounted for 476 thousand, or $15.7 \%$, of all VCA AAPI voters. Approximately 429 thousand, or $14.1 \%$, of all AAPI registered voters were estimated to be Indian. Voters estimated as Vietnamese comprised 477 thousand, or $15.7 \%$, of all VCA AAPI registered voters. Korean voters were estimated to make up over 262 thousand, or $8.6 \%$, of VCA AAPI registered voters. Voters estimated to be Japanese made up 140 thousand, or $4.6 \%$, of the registered AAPI electorate in VCA counties. All 'other' AAPI voters accounted for the remaining 480 thousand, or $15.8 \%$, of AAPI voters in VCA counties.

In Table 6 below, we observe that 304 thousand ballots, or $27.6 \%$ of all ballots cast by AAPI voters, were cast by voters estimated to be Chinese. During the 2022 Primary Election, approximately 169 thousand, or $15.4 \%$, of ballots cast by statewide AAPI registered voters were estimated to come from Filipino voters. Voters estimated to be Indian represented 140 thousand, or $12.7 \%$, of ballots cast by statewide AAPI voters. Approximately 141 thousand, or $12.8 \%$ of ballots cast by AAPI voters, were estimated to be Vietnamese. Voters estimated to be Korean comprised 80 thousand, or $7.3 \%$, of the state's AAPI ballots cast. During the 2022 Primary Election, voters estimated to be Japanese accounted for 69 thousand, or $6.3 \%$, of statewide AAPI ballots cast. All 'Other' AAPI subethnic voters made up the resulting 198 thousand, or $18 \%$, of all registered AAPI voters.

Table 6 shows that, in non-VCA counties, approximately 74 thousand, or $36.3 \%$ of ballots cast by AAPI voters, were estimated to be Chinese. Across the non-VCA counties, 36 thousand, or $17.8 \%$, of ballots cast by AAPI voters were estimated to be Filipino. Voters estimated to be Indian represented 26 thousand, or $12.7 \%$, of the non-VCA registered AAPI ballots cast. Over 12 thousand, or $6.2 \%$, of non-VCA AAPI ballots cast were from Vietnamese voters. Voters estimated to be Korean accounted for 8 thousand, or $4.1 \%$, of the non-VCA AAPI ballots cast. Voters are estimated to be Japanese made up 10 thousand, or $5.0 \%$ of ballots cast by AAPI voters. All 'other' AAPI voters comprised the final 36 thousand, or $17.9 \%$ of non-VCA AAPI ballots cast.

AAPI subethnic totals for VCA counties are shown in Table 5 below. During the 2022 Primary Election, 230 thousand, or $25.6 \%$ of ballots cast from AAPI voters, were from voters estimated to be Chinese. Voters estimated to be Filipino accounted for 133 thousand, or $14.8 \%$, of all ballots cast from AAPI voters in VCA counties. Approximately 114 thousand, or $12.7 \%$, of all ballots cast from AAPI voters were estimated to be from Indian voters. Voters estimated as Vietnamese made up 128 thousand, or $14.3 \%$, of all ballots cast from AAPI voters in VCA counties. Korean voters were estimated to make up over 72 thousand, or $8.0 \%$, of VCA ballots cast from AAPI voters. Voters estimated to be Japanese made up 58 thousand, or $6.6 \%$, of the ballots cast from the AAPI electorate in VCA counties. All 'other' AAPI subethnic voters accounted for the remaining 162 thousand, or $18.0 \%$, of ballots cast from AAPI voters in VCA counties.

## Table 6: Ballots Cast by AAPI Subethnic Group

Table 7 below shows the voter turnout rate by AAPI subethnic group. Voter turnout rates are calculated by dividing the number of ballots cast by the number of registered voters for each AAPI subethnic group.

Table 7 below shows statewide turnout rates for AAPI subethnic groups. Across all fifty-eight California counties, voters estimated to be AAPI had an overall turnout rate of $29.9 \%$. Voters estimated to be Chinese had a turnout rate of approximately $31.4 \%$ of voters participating in the 2022 Primary Election. Voters estimated to be Filipino had a turnout rate of $27.7 \%$. Voters estimated to be Indian had a turnout rate of $26 \%$. Voters estimated to be Vietnamese had a turnout rate of $26.9 \%$ in the 2022 Primary Election. There was a $27.5 \%$ turnout rate among voters estimated to be Korean. Voters estimated to be Japanese had a turnout rate of $42.4 \%$ during the 2022 Primary Election. All 'other' AAPI voters had a turnout rate of $33.8 \%$ across the state.

Below in Table 7 are AAPI subethnic turnout rates for non-VCA counties. Turnout in non-VCA counties for all AAPI voters was slightly higher in non-VCA counties than statewide and VCA turnout rates. Across all thirtyone non-VCA counties, AAPI voters had an overall turnout rate of $31.4 \%$. Voters estimated to be Chinese had a turnout rate of approximately $37.4 \%$ of voters participating in the 2022 Primary Election. Voters estimated to be Filipino had a turnout of $27.1 \%$ during the 2022 Primary Election. Voters estimated to be Indian had a turnout rate of $23.7 \%$. Voters estimated to be Vietnamese had a turnout rate of $26 \%$ in the 2022 Primary Election. Korean-estimated voters had a turnout rate of $27.4 \%$. Among voters estimated to be Japanese, there was a $44.4 \%$ turnout rate. All 'other' AAPI voters had a turnout rate of $34.1 \%$ in non-VCA counties.

In Table 7 are turnout rates for VCA counties. Across all thirty-one VCA counties, AAPI voters had an overall turnout rate of $29.9 \%$. Voters estimated to be Chinese had a turnout rate of approximately $29.8 \%$ of voters participating in the 2022 Primary Election. Filipino-estimated voters had a turnout of $27.9 \%$ during the 2022 Primary Election. Voters estimated to be Indian had a turnout rate of $26.6 \%$. Voters estimated to be Vietnamese had a turnout rate of $27 \%$ in the 2022 Primary Election. There was a $27.5 \%$ turnout rate among voters estimated to be Korean. Voters estimated to be Japanese had a turnout rate of $42.1 \%$ during the primary. All 'other' voters had a turnout rate of $33.7 \%$ across VCA counties.

Table 7: Turnout by AAPI Subethnic Group

| Jurisdiction | Total AAPI | Chinese | Filipino | Indian | Vietnamese | Korean | Japanese | Other |

Table 8 below shows the voting methods used by AAPI subethnic groups during the 2022 Primary Election. Below, the table shows that vote-by-mail was the overall preferred method of voting for statewide AAPI voters ( 1.0 million or $93.6 \%$ ) and preferred by Chinese ( 286 thousand or $94.1 \%$ ), Indian ( 132 thousand or $94.4 \%$ ), Filipino ( 159 thousand or $93.9 \%$ ), Japanese ( 65 thousand or $94.2 \%$ ), Korean ( 75 thousand or $93.9 \%$ ), Vietnamese ( 133 thousand or $94.1 \%$ ), and all 'other' AAPI voters (181 thousand or $91.1 \%$ ) across California.

The next most utilized method was voting in person at a vote center, with 57 thousand or $5.2 \%$ of AAPI voters using the method statewide. Vote centers were commonly used by Chinese (13 thousand or 4.3\%), Indian (6 thousand or 4.5\%), Filipino (8 thousand or 4.8\%), Japanese (3 thousand or 4.9\%), Korean (4 thousand or 5.4\%), Vietnamese (7 thousand or 5.3\%), and all 'other' AAPI voters (14 thousand or 7.2\%) across California. Inperson voting at a polling place and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and vote centers. Nearly 12 thousand, or $1.1 \%$, of AAPI voters cast a ballot in a polling place. Only 1,655 ballots were cast via a provisional CVR ballot. The remaining 53 ballots cast by AAPI voters statewide used non-provisional CVR ballots.

In Table 8 below, we see that, in non-VCA counties, vote-by-mail was the overall preferred method of voting for AAPI voters (192 thousand or $94.2 \%$ ) and preferred by Chinese ( 70 thousand or $94.5 \%$ ), Indian (24 thousand or $95.0 \%$ ), Filipino ( 34 thousand or $94.7 \%$ ), Japanese ( 9 thousand or $94.7 \%$ ), Korean ( 7 thousand or $94.9 \%$ ), Vietnamese ( 11 thousand or $94.5 \%$ ), and all 'other' AAPI voters ( 33 thousand or $91.9 \%$ ) across nonVCA counties. The next most utilized method was voting in person at a polling place, with 11 thousand or $5.7 \%$ of AAPI voters using the method in non-VCA. Polling places were commonly used by Chinese ( 4 thousand or $5.4 \%$ ), Indian (1 thousand or $4.8 \%$ ), Filipino (nearly 2 thousand or $5.2 \%$ ), Japanese ( 535 or $5.3 \%$ ), Korean (422 or $5.0 \%$ ), Vietnamese ( 686 or $5.5 \%$ ), and all 'other' AAPI voters (2 thousand or 7.9\%) across California. Inperson voting at a vote center and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and polling places.

Table 8 below shows that, in VCA counties, vote-by-mail was the preferred method of voting for AAPI voters ( 840 thousand or $93.5 \%$ ) and preferred by Chinese ( 216 thousand or $94.1 \%$ ), Indian ( 107 thousand or $94.2 \%$ ), Filipino (124 thousand or 93.7\%), Japanese ( 55 thousand or $94.2 \%$ ), Korean ( 67 thousand or $93.8 \%$ ), Vietnamese ( 121 thousand or $94.0 \%$ ), and all 'other' AAPI voters ( 147 thousand or $91.0 \%$ ) across VCA counties. The next most utilized method was voting in person at a vote center, with 57 thousand or $6.3 \%$ of AAPI voters using the method in VCA counties. Vote centers were commonly used by Chinese ( 13 thousand or $5.7 \%$ ), Indian ( 6 thousand or $5.5 \%$ ), Filipino ( 8 thousand or $6.1 \%$ ), Japanese ( 3 thousand or $5.7 \%$ ), Korean (4 thousand or $6.0 \%$ ), Vietnamese ( 7 thousand or $5.8 \%$ ), and all 'other' AAPI voters ( 14 thousand or $8.8 \%$ ) across VCA counties. In-person voting at a polling place and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail and vote centers. A total of 1,439 , or $0.2 \%$, of AAPI voters, voted using a provisional CVR.

## Takeaways

There were approximately 3.6 million registered AAPI voters statewide. We estimate that Chinese voters represented over 970 thousand or $26.3 \%$ of statewide registered AAPI voters. The number of registered Chinese voters is even more significant in non-VCA counties, comprising $30.4 \%$ of all non-VCA registered AAPI voters. Regardless of categorization, California statewide, non-VCA counties, or VCA counties, AAPI voters are well distributed. After Chinese voters, the next largest subethnic groups are all 'other' voters, followed by Filipino voters, then Indian Voters and Vietnamese voters, next Korean voters, and Japanese voters.

More than a million AAPI voters participated in the 2022 Primary Election in California. Approximately 304 thousand, or $27.6 \%$, of the ballots of those who voted, came from Chinese voters.

There was a $29.9 \%$ turnout rate for voters estimated to be AAPI during the 2022 Primary Election. There is a significant variation in turnout across AAPI subethnic groups. The highest turnout rate among AAPI subethnic voters was Japanese voters with an approximately $42.4 \%$ statewide. Chinese voters had a turnout rate of $31.4 \%$ across the state, $37.4 \%$ in non-VCA counties, and $29.8 \%$ in VCA counties including Los Angeles. In contrast, Indian voters had the lowest turnout rate among any AAPI subethnic group. Indian voters had a turnout rate of $26 \%$ across the state, $23.7 \%$ in non-VCA counties, and $26.6 \%$ in VCA counties.

Regardless of statewide, non-VCA, or VCA categorization, the vast majority - $90 \%$ or above - of AAPI subethnic voters across the state utilized vote-by-mail to participate in the 2022 primary. There only difference between AAPI subethnic groups is that 'other' voters used in-person voting at $1-$ to 2.5 -points higher rates than their other subethnic counterparts.

## Voters Classified as American Indian and Alaska Native (AIAN)

Using self-reported data and AIAN geographic boundary spatial analysis, we analyzed the AIAN-classified electorate by voters who self-reported as AIAN and non-self-reporting voters who were geolocated to live within federal and state-recognized boundaries. We provide data on each of the fifty-eight California counties, as well as grouping counties into categories of 'statewide,' non-VCA, VCA (including Los Angeles), and VCA (excluding Los Angeles). Our AIAN classification analysis is covered in greater detail in the methodology section of this report.

As shown in Table 9 below, there were 69,828 registered voters estimated to be AIAN, or $0.32 \%$ of all statewide registered voters at the time of the 2022 Primary Election.

Also presented in Table 9, 20,658, or $0.40 \%$ of non-VCA registered voters were estimated to be AIAN.

Table 9 shows that 49,170 , or $0.29 \%$ of VCA registered voters were estimated to be AIAN.

Table 10 below shows the total number of ballots cast by AIAN-classified voters and the percentage of total ballots cast that they represented. Shown in Table 6 below, there were 24,403 participating voters estimated to be AIAN or $0.34 \%$ of all statewide ballots cast during the 2022 Primary Election.

Also presented in Table 10, 5,266, or $0.31 \%$, of ballots cast in non-VCA counties voters were estimated to come from AIAN voters.

Table 10also shows that 19,137 or $0.35 \%$ of ballots cast in VCA counties, were from voters estimated to be AIAN.

Table 10: Ballots Cast by AIAN Classification

Table 11 below shows the voter turnout rate by AIAN classification. Voter turnout rates are calculated by dividing the number of ballots cast by the number of registered voters for voters classified as AIAN.

Shown in Table 11 below are turnout rates for California statewide. Across all fifty-eight California counties, voters had an overall turnout rate of $33 \%$. Non-AIAN classified voters had a turnout rate of $33 \%$. Voters estimated to be AIAN in VCA counties had a turnout rate of $34.9 \%$-approximately the same turnout average than the statewide average and non-AIAN turnout rate during the 2022 Primary Election.

Below in Table 11 are turnout rates for non-VCA counties. Turnout in non-VCA counties across all racial and ethnic groups was $32.9 \%$. Non-AIAN classified voters had a rate of $39.9 \%$ of voters participating in the 2022 Primary Election. There was a $25.5 \%$ turnout rate among voters estimated to be AIAN.

In Table 11 are turnout rates for VCA counties. Across all VCA counties, voters had an overall turnout rate of $33 \%$. Non-AIAN estimated voters had a turnout rate of $33 \%$. Voters estimated to be AIAN had a turnout rate of $38.9 \%$ - higher than the statewide average and non-AIAN turnout rate during the 2022 Primary Election.

Table 11: Turnout by AIAN Classification

| Jurisdiction | Total | Non-AIAN | AIAN |
| :--- | :---: | :---: | :---: |
| Statewide | $33.0 \%$ | $33.0 \%$ | $34.9 \%$ |
| Non-VCA | $32.9 \%$ | $32.9 \%$ | $25.5 \%$ |
| VCA (Including <br> Los Angeles) | $33.0 \%$ | $33.0 \%$ | $38.9 \%$ |
| VCA (Excluding <br> Los Angeles) | $35.3 \%$ | $35.3 \%$ | $40.3 \%$ |

Table 12 below shows the voting methods used by AIAN-classified voters during the 2022 Primary Election. Below, the table shows that vote-by-mail was the overall preferred method of voting for statewide AIAN voters, with 22 thousand, or $93.2 \%$, using a mail ballot. The next most utilized method for AIAN classified voters was in-person vote centers, with 1,020 , or $4.18 \%$, casting their ballot with the method. A total of 591 , or $2.4 \%$ of ballots cast by AIAN voters, were done so via an in-person polling place. The remaining 47 votes cast by AIAN classified voters were using provisional and nonprovisional CVR ballots.

Table 12 below shows the voting methods used by AIAN-classified voters during the 2022 Primary Election. Below, the table shows that vote-by-mail was the overall preferred method of voting for non-VCA counties' AIAN voters, with 4 thousand, or $88.5 \%$, using a mail ballot. The next most utilized method for AIAN classified voters was in-person polling places, with 591 , or $11.2 \%$, casting their ballot with the method. The remaining 10 votes cast by AIAN classified voters were using provisional CVR ballots.

Table 12 below shows the voting methods used by AIAN-classified voters during the 2022 Primary Election. Below, the table shows that vote-by-mail was the overall preferred method of voting for VCA counties' AIAN
voters, with 18 thousand, or $94.4 \%$, using a mail ballot. The next most utilized method for AIAN classified voters was in-person vote centers, with 1,020 , or $5.3 \%$, casting their ballot with the method. The remaining 37 votes cast by AIAN classified voters were using provisional and nonprovisional CVR ballots.

## Takeaways

There were more than 21 million registered voters across California during the 2022 Primary Election. We classified nearly 70 thousand, or $0.32 \%$, of statewide voters as AIAN. VCA counties accounted for less than a percentage point of the state's AIAN-classified voters.

AIAN-classified voters are proportionally represented in their percentage of ballots cast as they were in the number of registered voters. Of the 7.2 million statewide votes, AIAN-classified voters accounted for approximately 24 thousand, or $0.34 \%$. Riverside County represented $50.8 \%$ of the ballots cast by AIANclassified voters. It is important to note that estimating AIAN individuals is a persistent challenge faced by social scientists as there is no existing reliable AIAN surname list. While we estimated the AIAN electorate using self-reported race and residence on an AIAN tribal ground or reservation, it is possible that there are more AIAN voters that our methods did not capture.

The statewide turnout rate was $33 \%$ during the 2022 Primary Election. Across the state, AIAN-classified voters had a turnout rate of $34.9 \%$. AIAN turnout was as high as $38.9 \%$ in VCA counties. In non-VCA counties, turnout was $25.5 \%$. While the 2022 Primary Election is a small sample size, VCA counties are evidently conducting effective outreach to the AIAN electorate.

Similar to other groups, AIAN-classified voters widely preferred voting by mail, with $93.2 \%$ of all votes cast via mail ballot. An additional $6.6 \%$ of all votes cast by AIAN-classified voters were in person at a vote center or polling center.

## Voters by Age Categories

Using voter date of birth and the election date of June 7, 2022, we analyzed the California electorate by age categories, including groups aged 18 to 29, 30 to 49 years old, 50 to 64 years old, and 65 years old and over. We provide data on each of the fifty-eight California counties, as well as grouping counties into categories of 'statewide,' non-VCA, VCA (including Los Angeles), and VCA (excluding Los Angeles).

Covered in earlier sections, there were approximately 21.9 million registered voters at the time of the 2022 Primary Election. As shown in Table 13 below, approximately 4.4 million, or $20.1 \%$ of all registered voters, were aged 18 to 29 during the 2022 Primary Election. More than 7.2 million, or $33.1 \%$, of all California voters, were aged 30 to 49 - the largest age group among categories. The second largest estimated group was voters aged 50 to 64 , representing over 5.2 million, or $23.9 \%$, of California's registered electorate. Voters aged 65 and over made up the remaining 5 million, or $22.9 \%$, of all California registered voters at the time of the 2022 Primary Election.

Table 13 also shows that over 1.0 million, or $20.1 \%$, of all non-VCA registered voters were aged 18 to 29 . Across the non-VCA counties, more than 1.6 million, or $32.9 \%$, of registered voters were aged 30 to 49 - the largest age demographic at the time of the primary election. Voters aged 50 to 64 represented over 1.2 million, or $23.6 \%$, of the non-VCA registered electorate. Voters aged 65 and over comprised the final 1.2 million, or $23.4 \%$ of non-VCA registered voters.

VCA counties' totals are shown in Table 13 below. As of the 2022 Primary Election, voters aged 18 to 29 made up nearly 3.3 million, or $20.1 \%$, of registered voters in VCA counties. The registered electorate in VCA counties was primarily comprised of voters aged 30 to 49 , which made up over 5.5 million, or $33.1 \%$. The second largest demographic in VCA counties were voters aged 50 to 64 , with more than 4.0 million voters, or $24.0 \%$ of the electorate. Voters aged 65 and over accounted for the remaining 3.8 million, or $22.8 \%$, of registered voters in VCA counties.

As mentioned in an earlier section, approximately 7.2 million ballots were cast during the 2022 Primary Election. As shown in Table 14 below, approximately 636 thousand, or $8.8 \%$ of all ballots cast, were from voters aged 18 to 29 . During the primary election, more than 1.6 million, or $23.0 \%$, of all California ballots were cast from voters aged 30 to 49 . Voters aged 50 to 64 represented over 2.0 million, or $28.1 \%$, of California's cast ballots. Voters aged 65 and over made up the remaining 2.9 million, or $40.1 \%$, of all ballots cast in California during the 2022 Primary Election. - the largest number among age group categories.

Table 14 also shows that approximately 133 thousand, or $7.9 \%$ of all non-VCA ballots cast, were from voters aged 18 to 29. Across the non-VCA counties, more than 371 thousand, or $21.9 \%$, of ballots cast were from voters aged 30 to 49 . Voters aged 50 to 64 represented over 472 thousand, or $27.9 \%$, of the non-VCA cast ballots. During the 2022 Primary Election, voters aged 65 and over comprised the final 720 thousand, or $42.4 \%$ of non-VCA ballots cast - the most among any age category.

VCA counties' totals are shown in Table 14 below. During the 2022 Primary Election, voters aged 18 to 29 cast approximately 503 thousand, or $9.1 \%$, of the VCA counties' ballots. Nearly 1.3 million, or $23.4 \%$, of the ballots cast in VCA counties, came from voters aged 30 to 49 . Voters aged 50 to 64 cast more than 1.5 million, or $28.2 \%$, of the ballots in VCA counties. The ballots cast in VCA counties were primarily from voters aged 65 and over, which made up nearly 2.2 million, or $39.4 \%$.

Table 15 below shows the voter turnout rate by age categories. Voter turnout rates are calculated by dividing the number of ballots cast by the number of registered voters for each age category.

Shown in Table 15 below are turnout rates for California statewide. Across all fifty-eight California counties, voters had an overall turnout rate of $27.1 \%$. Voters 18 to 29 had a turnout rate of $14.4 \%$ - the lowest turnout rate of any group. Voters aged 30 to 49 had a turnout rate of $23.0 \%$ in the 2022 Primary Election. There was a
$38.8 \%$ turnout rate among voters aged 50 to 64 . Voters aged 65 and over had a turnout rate of $57.8 \%$ across the state - the highest rate among any age group in the 2022 Primary Election.

Below in Table 15 are turnout rates for non-VCA counties. Across all thirty-one non-VCA counties, voters aged 18 to 29 had a turnout rate of $12.9 \%$ - the lowest turnout rate of any group. Voters aged 30 to 49 had a turnout rate of $21.9 \%$. During the 2022 primary, voters aged 50 to 64 had a turnout rate of $38.9 \%$. Among voters aged 65 and over, there was a $59.6 \%$ turnout rate - the highest of any age group in the 2022 Primary Election.

In Table 15 are turnout rates for VCA counties. Across all twenty-nine VCA counties, voters aged 18 to 29 had a turnout rate of $14.9 \%$ - the lowest turnout rate of any group. Voters aged 30 to 49 had a turnout rate of $23.3 \%$. In the 2022 Primary Election, voters aged 50 to 64 had a turnout rate of $38.8 \%$. There was a $57.2 \%$ turnout rate among voters aged 65 and over - the highest among age groups.

Table 15: Turnout by Age Categories

| Jurisdiction | 18 to 29 | 30 to 49 | 50 to 64 | 65 and Over |
| :---: | :---: | :---: | :---: | :---: |
| Statewide | 14.4\% | 23.0\% | 38.8\% | 57.8\% |

Table 16 below shows the voting methods used by each age category during the 2022 Primary Election. As covered in prior sections, vote-by-mail was the overall preferred method of voting for statewide voters, with approximately 6.6 million, or $91.6 \%$, of votes cast via a mail ballot. Below the table shows that vote-by-mail was the overall preferred method of voting for voters aged 18 to 29 ( 580 thousand or $91.2 \%$ ), voters aged 30 to 49 ( 1.5 million or $90.6 \%$ ), voters aged 50 to 64 ( 1.8 million or $89.8 \%$ ), and voters aged 65 and over ( 2.7 million or $93.4 \%$ ) across California. The next most utilized method across all age groups was voting in person at a vote center. Vote centers were commonly used by voters aged 18 to 29 ( 41 thousand or $6.6 \%$ ), voters aged 30 to 49 (123 thousand or $7.4 \%$ ), voters aged 50 to 64 ( 161 thousand or $8.0 \%$ ), and voters aged 65 and over (144 thousand or $5.0 \%$ ) across California. Polling places were also used among voters of different age groups, with voters aged 18 to 29 ( 8.7 thousand or $1.4 \%$ ), voters aged 30 to 49 (nearly 30 thousand or $1.8 \%$ ), voters aged 50 to 64 ( 43 thousand or $2.1 \%$ ), and voters aged 65 and over ( 44 thousand or $1.5 \%$ ) using the method. A nonprovisional and provisional CVR were utilized at much lower rates than vote-by-mail, vote centers, and polling places.

Table 16 below, the table shows that vote-by-mail was the overall preferred method of voting for voters aged 18 to 29 (123 thousand or $92.9 \%$ ), voters aged 30 to 49 ( 340 thousand or $91.8 \%$ ), voters aged 50 to 64 (428 thousand or $90.7 \%$ ), and voters aged 65 and over ( 674 thousand or $93.7 \%$ ) across California. The next most utilized method across all age groups was voting in person at a vote center. Voting centers were commonly used by voters aged 18 to 29 ( 41 thousand or $6.6 \%$ ), voters aged 30 to 49 ( 123 thousand or $7.4 \%$ ), voters aged 50 to 64 (161 thousand or $8 \%$ ), and voters aged 65 and over (144 thousand or 5\%) across California. Voting in person at a polling place and casting a nonprovisional CVR and provisional CVR were utilized at much lower rates than vote-by-mail polling places.

Table 16 below, the table shows that vote-by-mail was the overall preferred method of voting for voters aged 18 to 29 ( 457 thousand or $91.0 \%$ ), voters aged 30 to 49 ( 1.1 million or $90.2 \%$ ), voters aged 50 to 64 (nearly 1.4 million or $89.5 \%$ ), and voters aged 65 and over ( 2.0 million or $93.3 \%$ ) across California. The next most utilized method across all age groups was voting in person at a vote center. Vote centers were commonly used by voters aged 18 to 29 ( 41 thousand or $8.3 \%$ ), voters aged 30 to 49 ( 123 thousand or $9.5 \%$ ), voters aged 50 to 64 (161 thousand or $10.4 \%$ ), and voters aged 65 and over (144 thousand or $6.6 \%$ ) across California. Casting a provisional CVR ballot was also done among voters of different age groups, with voters aged 18 to 29 ( 3 thousand or $0.6 \%$ ), voters aged 30 to 49 ( 2 thousand or $0.2 \%$ ), voters aged 50 to 64 ( 1 thousand or $0.1 \%$ ), and voters aged 65 and over ( 1 thousand or $0.1 \%$ ) using the method. Voting at a polling place or casting a nonprovisional CVR ballot were utilized at much lower rates than vote-by-mail, vote centers, and CVR ballots.

Table 16: Voting Methods by Age Classification

| Jurisdiction | Age Category | Vote-By-Mail |  | Vote Center |  | Polling Place |  | Nonprovisional CVR |  | CVR |  |

## Takeaways

There were 21.9 million registered voters across California during the 2022 Primary Election. The registered electorate in California is primarily comprised of voters aged 30 to 49 . Voters aged 30 to 49 made up approximately 7.2 million, or $33.1 \%$, of the state's registered electorate. The next largest age demographic was voters aged 50 to 64 , followed by those aged 65 and over, and then those aged 18 to 29 .

While voters aged 65 and over were the third largest age demographic, they represented approximately $40.1 \%$ of the ballots cast during the 2022 Primary Election. In contrast, voters aged 30 to 49 comprised the largest share of the registered electorate but had the second lowest percentage of ballots cast at approximately $23 \%$.

The statewide turnout rate was $33 \%$ during the 2022 Primary Election. Voters aged 65 and over not only comprised the largest share of ballots cast but also had the highest turnout rates. Our analysis shows that older portions of the electorate will likely participate in elections at rates that can even double average turnout rates. Conversely, the younger the voting demographic, the less likely they are to participate in an election. Voters aged 18 to 29 and 30 to 49 had turnout rates lower than overall averages. While low turnout among young voters is a historical and national phenomenon, the turnout rates discussed above indicate that outreach needs to be targeted to younger voting demographics.

Resembling the trends discussed in previous sections, voters of all age groups widely preferred voting by mail. One noteworthy observation is that voters aged 65 and over favored voting by mail at 1 - to 3.5 -points higher rates than other age groups.

## Voters by Primary Language Groups

Language access has been a cornerstone of ensuring equitable access to the franchise. Federal and California state laws govern language access in all counties in California, including VCA Counties. Using self-reported data on registration language, we analyzed registration, voting, and turnout trends for voters that registered in English and non-English languages, including Spanish, Vietnamese, Chinese, Korean, Tagalog, Japanese, Thai, Hindi, and Khmer. We provide data on each of the 27 VCA counties and group counties into a combined total category that includes Los Angeles and a combined total category that excludes Los Angeles.

As shown in Table 17 below, the age group with the fewest non-English registrants was those 18 to 29 years, with over 32 thousand, or $0.96 \%$, VCA voters registered in a language other than English. More than 132 thousand, or $2.34 \%$, voters in VCA counties aged 30 to 49 registered in a language other than English. More than 301 thousand, or $6.99 \%$, voters ages 50 to 64 registered in a language other than English. The largest nonEnglish age group was voters 65 years and older, with over 352 thousand, or $8.47 \%$ non-English registration.

Table 17: Age Category by English and Non-English Registered Voters Across VCA Counties

Table 18 below shows the total number of registered voters for each of the ten languages we have data on, as well as an "Other" category. As shown in Table 18 below, more than 15.9 million VCA voters registered in English. Of the non-English registered voters, over 507 thousand registered in Spanish. The next largest nonEnglish group was Chinese, with over 105 thousand registered voters. The fourth largest language group was Vietnamese, with 104 thousand registered VCA voters. Over 62 thousand voters in VCA registered in Korean, and more than 13 thousand registered in Tagalog. There were 4,913 Japanese-speaking voters registered at the time of the 2022 Primary Election. Thai, Hindi, and Khmer had 3,919, 2,872, and 2,211 voters registered in each language group, respectively. The remaining 12,427 VCA voters were registered in a language other than those listed in the table.

Like Table 18 above, Table 19 shows voters registered in language groups represented as percentages. Below, English-speaking voters represent $95.12 \%$ of all VCA registered voters. Spanish is the next largest language group, representing $3.03 \%$ of the VCA registered electorate. At the time of the 2022 Primary Election, no other language group comprised more than $1 \%$ of the registered voters in VCA counties.

Table 20 below shows nativity by English and non-English registered status for voters across VCA counties at the time of the 2022 Primary Election. When an individual registers to vote, they self-report their place of birth by U.S. state or country. The table below cross-analyzes this nativity data with English language status.

As shown in Table 20, of the 11.1 million VCA voters born in the United States, 11.0 million, or $99.35 \%$, are registered to vote in English. The remaining 72 thousand, or $0.65 \%$, are registered to vote in a language other than English. In comparison, of the nearly 5.6 million VCA voters born U.S. abroad, 4.8 million, or $86.62 \%$, were registered to vote in English. The remaining 747 thousand voters born outside the U.S., or $13.38 \%$, were registered to vote in a language other than English.

Table 21 below shows the voter turnout rate by the languages listed on the California voter file. Voter turnout rates are calculated by dividing the number of ballots cast by the number of registered voters for each language group.

As shown in Table 21 below, the total turnout rate for all VCA counties was $33.1 \%$. English-speaking VCA voters had a turnout rate of $33.4 \%$ while Spanish-speaking voters had a turnout rate of $21.4 \%$. VCA voters registered in Vietnamese had a turnout rate of $35.3 \%$, while Chinese-speaking voters had a turnout rate of $26.1 \%$. Voters registered in Korean had a turnout rate of $33.7 \%$, and Tagalog-speaking voters had a turnout rate of $30.3 \%$. Japanese, Thai, Hindi, and Khmer voters had turnout rates of $29.7 \%, 26.5 \%, 20.8 \%$, and $19.3 \%$, respectively. Those VCA voters registered in a language other than those listed had a turnout rate of $27.5 \%$.

Table 22 below shows the voting methods utilized by voters registered in English and non-English languages. At the time of the 2022 Primary Election, vote-by-mail was widely the preferred method of casting ballots statewide. Below, the table shows that of the 5.3 million English-speaking VCA voters, nearly 4.9 million, or $91.3 \%$, voted by mail. The next most utilized voting method was casting a ballot in-person at a vote center with 455 thousand, or $8.6 \%$, of VCA ballots. The remaining $1,035(0.01 \%)$ and $6,500(0.01 \%)$ ballots were cast using non-provisional CVR and CVR, respectively.

Table 22 also shows that of more than 204 thousand VCA voters registered in a language other than English, over 188 thousand, or $92.0 \%$, voted by mail. The second preferred method for non-English speaking voters was voting in person at a vote center, with more than 16 thousand, or $7.8 \%$, choosing this method. The remaining 20 $(0.01 \%)$ and $281(0.01 \%)$ ballots were cast using a non-provisional CVR and CVR, respectively.

## Takeaways

There were 16.7 million registered voters across California VCA counties at the time of the 2022 Primary Election. The registered electorate in VCA counties was largely comprised of English-speaking voters. Voters registered in English accounted for approximately 16 million, or $95.1 \%$ of all VCA registered voters. The next largest language group was Spanish, which comprised over 507 thousand, or $3.0 \%$ of the VCA registered electorate. No other single language group accounted for more than $1 \%$ of the overall VCA registered electorate.

Non-English registered voters were more likely to belong to older age categories. For example, in VCA counties, there were over ten times as many non-English registered voters aged 65 and over $(352,569)$ as there were non-English registered voters aged 18 to $29(32,603)$.

Another key takeaway is that foreign-born voters were more likely to register in a language other than English compared to voters born in the United States. In VCA counties, over 747 thousand, or $13.38 \%$ of foreign-born
voters registered in a language other than English. In contrast, only 72 thousand, or $0.65 \%$ of U.S.-born voters registered in a language other than English.

Turnout across language groups varied significantly. VCA voters registered in Vietnamese had the highest turnout rate ( $35.3 \%$ ), followed by Korean-speaking voters (33.7\%) and English-speaking voters (33.4\%). Khmer-speaking voters had the lowest turnout rate (19.3\%), followed by Hindi-speaking voters ( $20.8 \%$ ) and Spanish-speaking voters $(21.4 \%)$. While low turnout among immigrant voters is a historical and national phenomenon, the turnout rates discussed above indicate that outreach needs to be targeted to non-English voters - particularly Spanish-speaking voters, given that they are the second largest language group in California.

VCA voters registered in both English and non-English languages largely preferred voting by mail. One notable observation is that non-English-speaking voters were nearly 1 point more likely to vote by mail than Englishspeaking voters, suggesting that voting by mail may be slightly more accessible for non-English-speaking voters than their English-speaking counterparts.

## VOTING BY MAIL

## Introduction

Voting by mail has been a popular method of voting among California voters and has accounted for more than half of the State's ballots cast since the 2012 Primary Election. ${ }^{37}$ Beginning in 2020, the coronavirus pandemic presented threats to voter safety. In-person voting became a risk of transmitting the virus and threatened access to the ballot for millions of voters across the U.S. To minimize in-person contact, many states implemented policies to encourage higher levels of voting by mail. California was a state that took even further precautions, committing to sending every registered voter a vote-by-mail ballot by default during the pandemic. Signed into law in 2016, before the COVID-19 threat, California counties have adopted the Voter's Choice Act (VCA) electoral model, which - among other priorities - sends a mail ballot to registered voters in counties that adopted the model.

Given the necessity and popularity of voting by mail, this section will analyze the methods California voters used to cast mail ballots during the 2022 Primary Election. Voters had the option to return their mail ballot via mail, county-issued drop boxes, vote center drop-offs, additional drop-off locations, and FAX. Our analysis also includes mail ballots that voters returned but were either non-deliverable or rejected by county election officials.

As shown in Table 23 below, 6.6 million mail ballots were cast by California voters during the 2022 Primary Election. Over 3.3 million, or $50.8 \%$, of all mail ballots were returned via mail. The second most popular method to return mail ballots was via county-issued drop boxes, with over 2.1 million, or $31.9 \%$, mail ballots. Vote center drop-off locations are estimated to be the third most utilized method of returning mail ballots, accounting for more than 673 thousand, or $10.2 \%$. Additional drop-off locations accounted for 415 thousand, or $6.3 \%$, of the State's mail ballots cast. Returning mail ballots via FAX had the lowest utilization rate, with 3,599, or $0.05 \%$, of all mail ballots returned using this method. Just over 51 thousand mail ballots were deemed nondeliverable or were rejected by county election officials, leading to a statewide mail ballot rejection rate of $0.78 \%$.

Table 23 also shows that over 1.5 million mail ballots were cast by voters living in the thirty-one non-VCA counties. Across the non-VCA counties, more than 887 thousand, or $56.6 \%$, mail ballots were cast via mail. Mail ballots cast at a county-issued drop box represented over 339 thousand, or $21.6 \%$, of the non-VCA registered electorate. The third most utilized method of casting mail ballots was via additional drop-off locations, which comprised nearly 326 thousand, or $20.8 \%$, of non-VCA mail ballots cast. Voters estimated to be Black were 274 thousand, or $5.3 \%$, of the non-VCA electorate. More than 13 thousand mail ballots were deemed non-deliverable or were rejected by county election officials, leading to a statewide mail ballot rejection rate of $0.87 \%$ - slightly higher than the statewide average.

[^11]VCA counties' totals are shown in Table 23 below. As of the 2022 Primary Election, over 5.0 million mail ballots were cast in VCA counties. The mail ballots cast in VCA counties were primarily by mail, which made up nearly 2.5 million, or $49.0 \%$. The second most preferred method of casting mail ballots in VCA counties was via county-issued drop boxes, with nearly 1.8 million voters, or $35.0 \%$ of the mail ballots. Mail ballots cast by vote centers drop-offs comprised over 673 thousand, or $13.3 \%$, of all mail ballots cast. Additional drop-off locations accounted for 90 thousand, or $1.8 \%$, of mail ballots cast. The remaining 2,792 mail ballots, or $0.06 \%$, were cast via FAX. Nearly 38 thousand mail ballots were non-deliverable or rejected by county election officials, equating to a mail ballot rejection rate of $0.75 \%$.

Table 23: Mail Ballot Return Methods

| Jurisdiction | Total Mail Ballots | Mail |  | Drop Box |  | Vote Center Drop Off |  | Drop Off <br> Location |  | FAX |  | Non-Deliverable / Rejected |  |

Table 24 below shows the mail ballot return methods used by each racial/ethnic group during the 2022 Primary Election. Below, the table indicates that casting a mail ballot via mail was the overall preferred method for all voters ( 3.3 million or $50.8 \%$ ), voters estimated to be white ( 1.8 million or $50.1 \%$ ), voters estimated to be Black ( 144 thousand or $49.9 \%$ ), voters estimated to be Latino ( 647 thousand or $49.0 \%$ ), voters estimated to be AAPI ( 556 thousand or $53.8 \%$ ), and voters estimated as 'Other' (200 thousand or 48.6\%) across California. The following preferred method across all racial/ethnic groups was casting a mail ballot by county-issued drop boxes. Drop boxes were commonly used by voters estimated to be white ( 1.1 million or $32.0 \%$ ), voters estimated to be Black ( 87 thousand or $30.2 \%$ ), voters estimated to be Latino ( 417 thousand or $31.6 \%$ ), voters estimated to be AAPI ( 327 thousand or $31.7 \%$ ), and voters estimated as 'Other' (138 thousand or $33.4 \%$ ) across California. Vote centers drop-offs and additional drop-off locations were utilized by mail ballot voters but at lower rates than casting a mail ballot via mail and county-issued drop boxes. Using FAX to cast a mail ballot was not utilized at a rate over $0.1 \%$ for any racial/ethnic group in California. Ballots deemed undeliverable or rejected by county election officials did not exceed $1.0 \%$ for any racial/ethnic group in California.

In non-VCA counties, vote centers were unavailable to drop off mail ballots. As a result, mail ballot return methods were utilized at varying rates compared to the statewide numbers discussed in the paragraph above. Table 24 below shows that casting a mail ballot via mail was the overall preferred method for all voters ( 887 thousand or $56.6 \%$ ), voters estimated to be white ( 502 thousand or $55.8 \%$ ), voters estimated to be Black ( 37 thousand or $58.2 \%$ ), voters estimated to be Latino (164 thousand or $56.0 \%$ ), voters estimated to be AAPI (119 thousand or $62.1 \%$ ), and voters estimated as 'Other' ( 62 thousand or $54.7 \%$ ). For voters estimated to be white (208 thousand or $23.2 \%$ ), AAPI ( 37 thousand or 19.3\%), and 'Other' ( 26 thousand or $23.4 \%$ ), the next most utilized method was casting a mail ballot by county-issued drop boxes. Casting a mail ballot via additional drop-off locations was the second most utilized method for voters estimated to be Black ( 15 thousand) and Latino ( 71 thousand or $24.2 \%$ ). Drop boxes were commonly used by voters estimated to be white ( 1.1 million or $32.0 \%$ ), voters estimated to be Black ( 87 thousand or $30.2 \%$ ), voters estimated to be Latino ( 417 thousand or $31.6 \%$ ), voters estimated to be AAPI ( 327 thousand or $31.7 \%$ ), and voters estimated as 'Other' ( 138 thousand or $33.4 \%$ ) across California. Similar to statewide rates, using FAX to cast a mail ballot was not utilized at a rate over $0.1 \%$ for any racial/ethnic group in non-VCA counties. Across all racial/ethnic groups, ballots deemed undeliverable or rejected by county election officials exceeded $1.0 \%$ only for Black voters ( $1.11 \%$ ).

Table 24 below shows that casting a mail ballot via mail was the overall preferred method for all voters (2.4 million or $49.1 \%$ ), voters estimated to be white ( 1.3 million or $49.4 \%$ ), voters estimated to be Black (107 thousand or $47.6 \%$ ), voters estimated to be Latino ( 482 thousand or $47.0 \%$ ), voters estimated to be AAPI (436 thousand or $51.9 \%$ ), and voters estimated as 'Other' (138 thousand or 46.2\%). Like statewide estimates, the next most utilized method across all racial/ethnic groups was casting a mail ballot by county-issued drop boxes in VCA counties. Drop boxes were commonly used by voters estimated to be white ( 930 thousand or $35.0 \%$ ), voters estimated to be Black ( 76 thousand or $34.0 \%$ ), voters estimated to be Latino ( 361 thousand or $35.2 \%$ ), voters estimated to be AAPI (290 thousand or 34.5\%), and voters estimated as 'Other' (111 thousand or 37.2\%)
across VCA counties. Vote centers drop-offs and additional drop-off locations were utilized by mail ballot voters but at lower rates than casting a mail ballot via mail and county-issued drop boxes. Using FAX to cast a mail ballot was not utilized at a rate over $0.1 \%$ for any racial/ethnic group in California. Ballots deemed undeliverable or rejected by county election officials did not exceed $1.0 \%$ for any racial/ethnic group in California.

Table 24: Mail Ballot Return Methods by Race and Ethnicity

| Jurisdiction | Subethnic Group | Mail |  | $\begin{gathered} \text { Drop } \\ \text { Box } \end{gathered}$ |  | Vote Center Drop Off |  | Drop Off <br> Location |  | FAX |  | Non-Deliverable / Rejected |  |

## Takeaways

Across California, there were 7.2 million ballots cast in the 2022 Primary Election. Of the votes cast statewide, 6.6 million, or $91.6 \%$, were cast as a mail ballot. Given the popularity of vote-by-mail, it is important to highlight that over 3.3 million, or $50.8 \%$, of all mail ballots were returned via mail. Returning mail ballots via mail was the most utilized return method among non-VCA and VCA county voters.

Across all racial/ethnic groups, casting a ballot via a county-issued drop-box was at least 10 points higher in VCA counties compared to non-VCA counties. This difference could indicate that VCA counties provide more drop boxes or make them more accessible than their non-VCA counterparts. While vote centers were unavailable to return mail ballots in non-VCA counties, they were adequately utilized by voters in VCA counties to drop off mail ballots. With an overall utilization rate of $13.3 \%$ in VCA counties and $0.0 \%$ in nonVCA counties, vote centers have proved to be an important factor for voting in person and by mail ballot.

While the rate of mail ballots deemed undeliverable or rejected by county election officials remains under $1.0 \%$, there is a slight disparity against Black voters across the State, non-VCA counties, and VCA counties. The scope of this analysis does not include why mail ballots were deemed undeliverable or rejected by county election officials, but this topic could be further investigated in future research.

## CONCLUSION

California had over 21 million registered voters in the 2022 Primary Election. This is an increase of over one million since the 2020 Primary Election (a Presidential Primary) and three million since the 2018 Primary Election. ${ }^{38}{ }^{39}$ As California's diverse electorate continues to grow, it will be imperative for election officials to continue to address the turnout gap described at the beginning of this report. Culturally appropriate and frequent outreach, accessible voting methods, and increased investment on infrequent voters are all recommended to counter the cycle of under- mobilization.

During the 2022 Primary Election, the turnout rate of registered white voters was significantly higher than all other groups. While white turnout reached $44.4 \%$, neither Latino, AAPI, nor Black turnout reached $30 \%$. The turnout gap between white and Latino voters was especially large as white turnout was more than double that of Latino turnout ( $44.4 \%$ compared to $21.2 \%$ ). Although this is not a novel trend, state and county elections officials, as well as electoral campaigns, must continue to address these turnout gaps.

Turnout gaps also existed across age groups during the 2022 Primary Election. While nearly $60 \%$ of registered voters older than 65 voted, turnout for voters aged 18 to 29 was $14.4 \%$ - meaning that California's oldest registered electorate was about four times as likely to vote compared to its youngest registered electorate.

Another key observation is that there are about one million voters registered in a language other than English with Spanish-speakers being the second largest language group. Turnout across language groups ranged from 19\% (Khmer) to 35\% (Vietnamese). For California's two largest language groups, turnout for English-speaking voters (33.4\%) was more than ten percentage points higher than Spanish-speaking voters (21.4\%).

Finally, there was a high utilization of vote-by-mail in the 2022 Primary Election. Approximately 6.6 million, or $91.6 \%$ of Californians voted by mail during the primary. In VCA counties (excluding Los Angeles), VBM is especially common with $93.9 \%$ of votes being cast by mail.

Given these conclusions, our policy recommendations are focused on lessening turnout gaps between racial, age, and language groups.

## Below are our top recommendations:

1. All counties should invest in mobilization through social contact.

[^12]i. Door-to-door canvassing - especially when done by trusted community groups, is a proven method of increasing turnout among non-habitual voters. ${ }^{40}$
2. All counties should work to expand civic education in schools.
i. There is evidence that Black and Latino teens having less access to civic education than their white counterparts. ${ }^{41}$ By partnering with local schools, county elections offices can mobilize youth and help close the age-based and racial turnout gaps.
3. All counties should increase community outreach and partnerships to engage with non-English speaking voters continually during election cycles.
i. This includes more robust engagement with Language Accessibility Advisory Committees (LAAC), which most counties already utilize to advise and assist county registrars with implementation of state and federal law.

[^8]:    ${ }^{33}$ VCA counties listed in each table have an asterisk* next to them.

[^9]:    ${ }^{34}$ Turnout is the measurement of voter participation in the election. It is calculated by dividing the number of ballots cast by the number of active registered voters for a group.

[^10]:    ${ }^{35}$ Definitions for voting methods: Vote by Mail - return ballot by mail; Vote Center - physical locations that offer ballot drop off, replacement ballots, accessible voting machines, in-person voting, and same day voter registration; Provisional - ballots cast by voters who believe they are registered to vote even though their names are not on the official voter registration list at the polling place, or instead want to vote at their polling place or a vote center, but they did not receive their mail ballot or do not have their ballot with them; and, Polling Place - the location of the election day polling place is provided in the county Voter Information Guide mailed by county elections officials. CVR - an affidavit of registration submitted at the county elections office during the fourteen days before an election or on election day. The voter is then conditionally registered to vote and given a CVR provisional ballot. Once the county elections office processes the affidavit of registration, determines the individual's eligibility to register, and validates the individual's information, the registration becomes permanent, and the CVR provisional ballot will be counted.
    ${ }^{36}$ The number of ballots cast at polling places varies between VCA and non-VCA counties, as polling places have been largely removed from VCA counties. However, in VCA counties, county election offices can serve as a 'polling place' for voters to drop off ballots.
